N.Contains: membrane protein M; nonstructural protein NS1
Species: tick-borne encephalitis virus
C;Species: tick-borne encephalitis virus
C;Accession: A48352; S18104
C;Accession: A48352; S18104
C;Accession: A48352; S18104
C;Accession: A48352; S18104
Aritle: Sequence of the NS 1 gene of the K 23 isolate of tick-borne encephalitis virus

A,Description:

A,Note: expressed in normal lung; expressed in some carcinomas

C,Superfamily: basic fibroblast growth factor receptor 1; immunoglobulin homology; protes)

C;Superfamily: basic fibroblast growth factor receptor 1; immunoglobulin homology; protes)

C;Keywords: ATP; autophosphorylation; duplication; glycoprotein; growth factor receptor;

F;12-400main: signal sequence #status predicted <SIG.

F;25-802/Product: fibroblast growth factor receptor 4 #status predicted <MAT>

F;25-369/Domain: extracellular #status predicted <SIG.

F;50-103/Domain: immunoglobulin homology <IM3>

F;50-103/Domain: immunoglobulin homology <IM3>

F;30-390/Domain: immunoglobulin homology <IM3>

F;310-802/Domain: intracellular #status predicted <INT>
F;310-802/Domain: protein kinase homology <IM3>
F;310-802/Domain: protein kinase homology <IM3>
F;310-802/Domain: protein kinase ATP-binding mobif F;57-101,172-224,271-333/Disulfide bonds: #status predicted

F;5112,258,290,311,322/Binding site: carbohydrate (Asn) (covalent) #status predicted

F;617,630/Sinding site: lys, Glu, Asp #status predicted

F;617,630/Binding site: phosphate (Tyr) (covalent) (by autophosphorylation) #status predicted

F;643/Binding site: phosphate (Tyr) (covalent) (by autophosphorylation)

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  ö
                                                                                                                                                                                                                            fibroblast growth factor receptor 1 precursor - chicken
NiAlternate names: basic fibroblast growth factor receptor
NiContains: protein-tyrosine kinase (EC 2.7.1.112) cek1
Cispecies: Gallus gallus (chicken)
Cispecies: 31-Dec-1993 #sequence_revision 31-Dec-1993 #text_change 09-Jul-2004
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Gaps

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      97 NiAtternate names: basic fibroblast growth factor receptor
NiContains: protein-tyrosine kinase (EC 2.7.1.112) filg
C;Species: Mus musculus (house mouse)
C;Date: 3.1-06-1933 #text_change 09-Jul-2004

01-FB2-1994 (Rel. 28, Last sequence update)
25-CCT-2004 (Rel. 45, Last sequence update)
Genome polyprotein (Contains: Capsid protein C (Core protein); Matrix
protein (Envelope protein M); Major envelope protein E; Nonstructural
proteins NS1, NS2A, NS2B, NS2A, NS2B, NS2
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       -Xbb bonds in
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     lipoprotein envelope. The envelope consists of two proteins: protein M and glycoprotein E. The nucleocapsid is a complex of protein C and mRNA. In immature particles, there are 60 icosederally organized trimeric spikes on the surface. Each spike consists of three heterodimers of envelope protein M precursor (prM) and envelope protein E (By similarity).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 flaviviruses.";
Virology 188:875-880(1992).

-!- FUNCTION: The small proteins NS2A, NS4A and NS4B are hydrophobic, supersting a possible membrane-related function. NS5 may play a role in the viral RNA replication. NS3 and NS2B form a protease which processes the viral polyprotein into separate proteins.

-!- CATALYTIC ACTIVITY: Selective hydrolysis of Xaa-Xaa-|-Xbb bonds is which each of the Xaa can be either Arg or Lys and Xbb can be either Ser or Ala.
                                                                                                                                                                                                                                                                                                  Gaps

-I. CATALYTIC ACTIVITY: 2-deoxy-D-ribose 5-phosphate = D-glyceraldehyde 3-phosphate + acetaldehyde alphosphate + acetaldehyde - application and deoxyribonucleotide catabolism.
-I. SAMELMAN: Nucleotide and deoxyribonucleotide catabolism.
-I. SUBCELLULAR LOCATION: Cytoplasmic (By similarity).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   There are no restrictions on ng as its content is in no

-!- CATALYTIC ACTIVITY: 2-deoxy-D-ribose 5-phosphate = D-glyceraldehyde 3-phosphate + acetaldehyde.

-!- PATHWAY: Nucleotide and deoxyribonucleotide catabolism.
-!- SUBCELJULAR LOCATION: Cytoplasmic (By similarity).
-!- SIMILARITY: Belongs to the deoC/fbaB aldolase family. DeoC
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             (B
